Side Panels

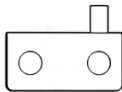

Divider Panel

Door

Small Shelf

Door Hinge

Diffuser Strip

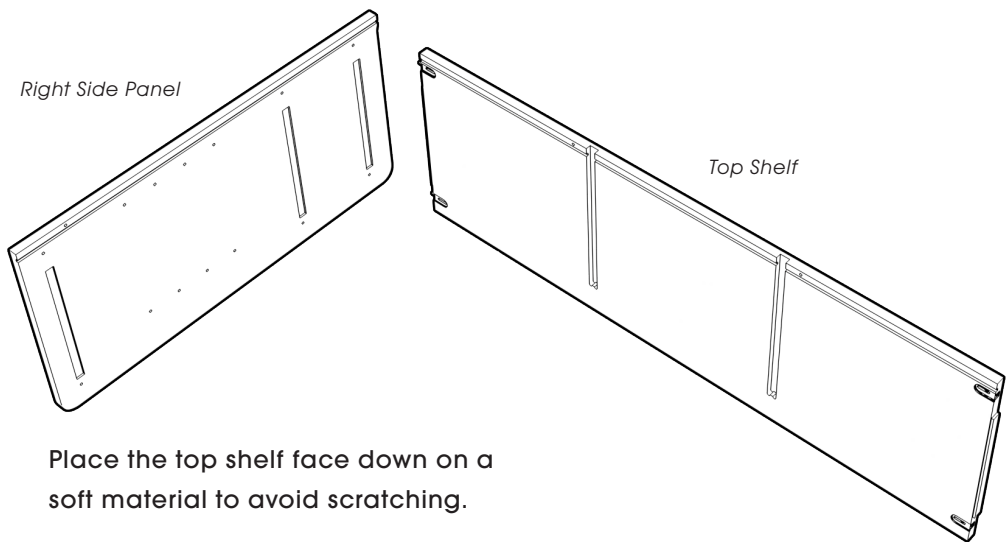

Hinge Screw

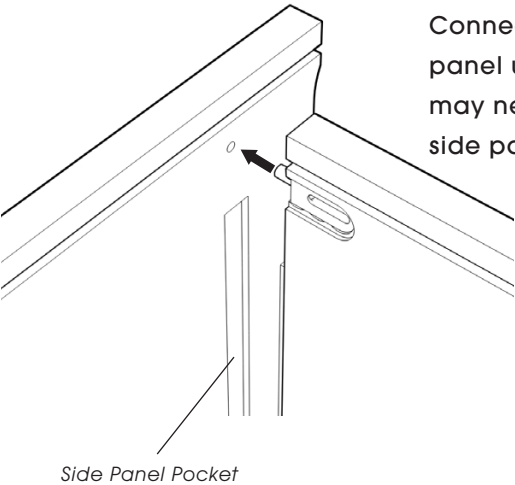

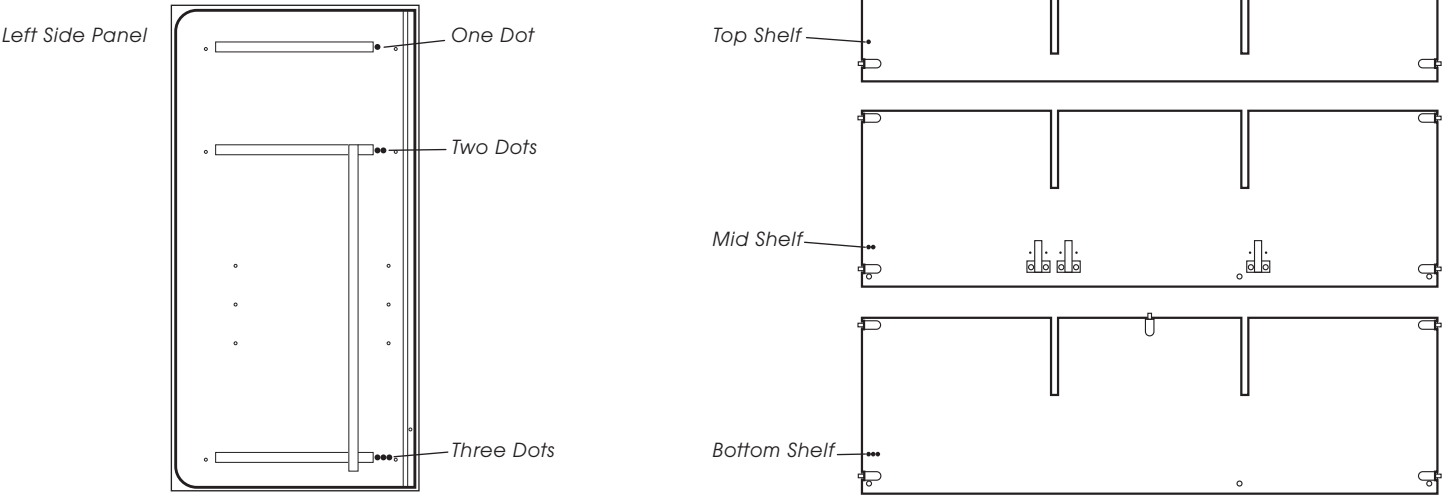

Sticky Tab

Note: Please retain all boxes until you are certain that your product isn't damaged and that you do not wish to return it. Disposal of boxes may prevent/delay our ability to resolve your request.

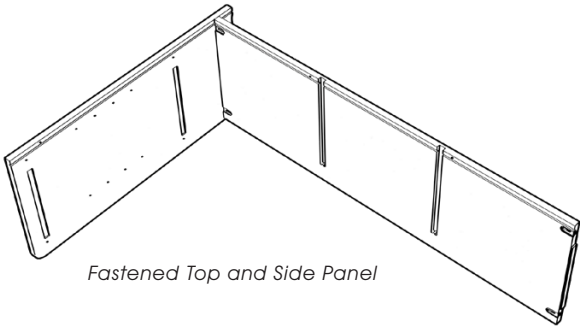

Step 1: Attach Top to Right Side Panel

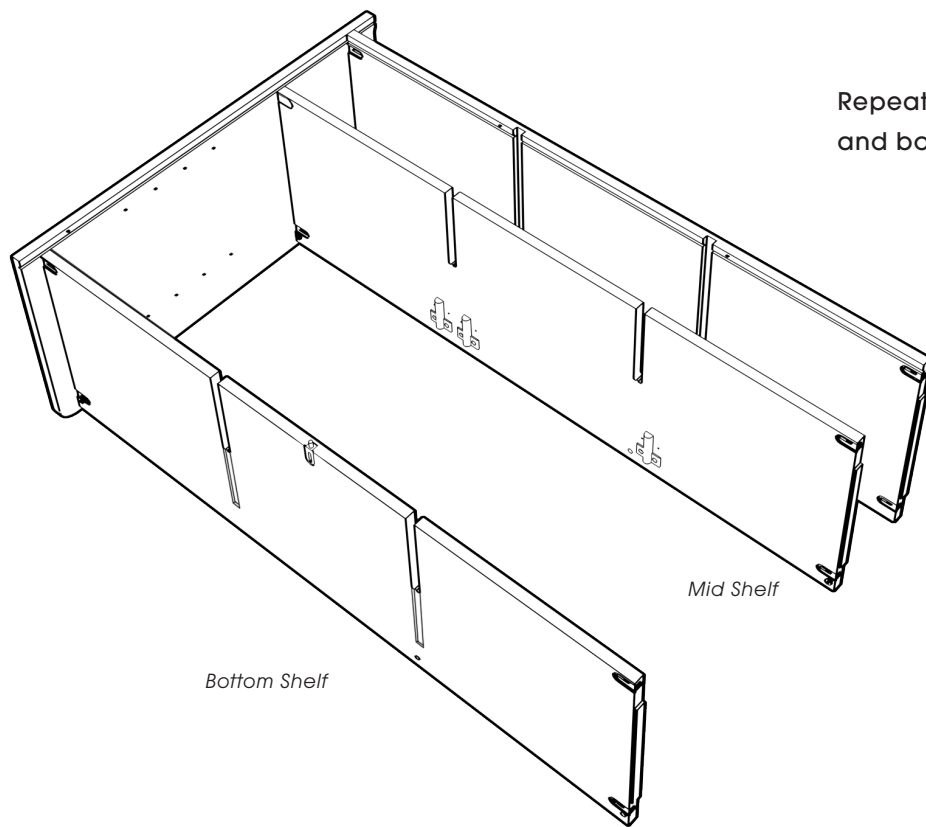

Make sure you use the correct shelf. The top shelf has longer center channels than the others. Look for the series of dots communicating which slot is for which shelf. One dot for the top shelf, Two dots for the mid shelf and three dots for the bottom shelf.

Connect the top shelf to the right side panel using the installed fasteners. You may need to “pop” the shelf into the side panel pocket.

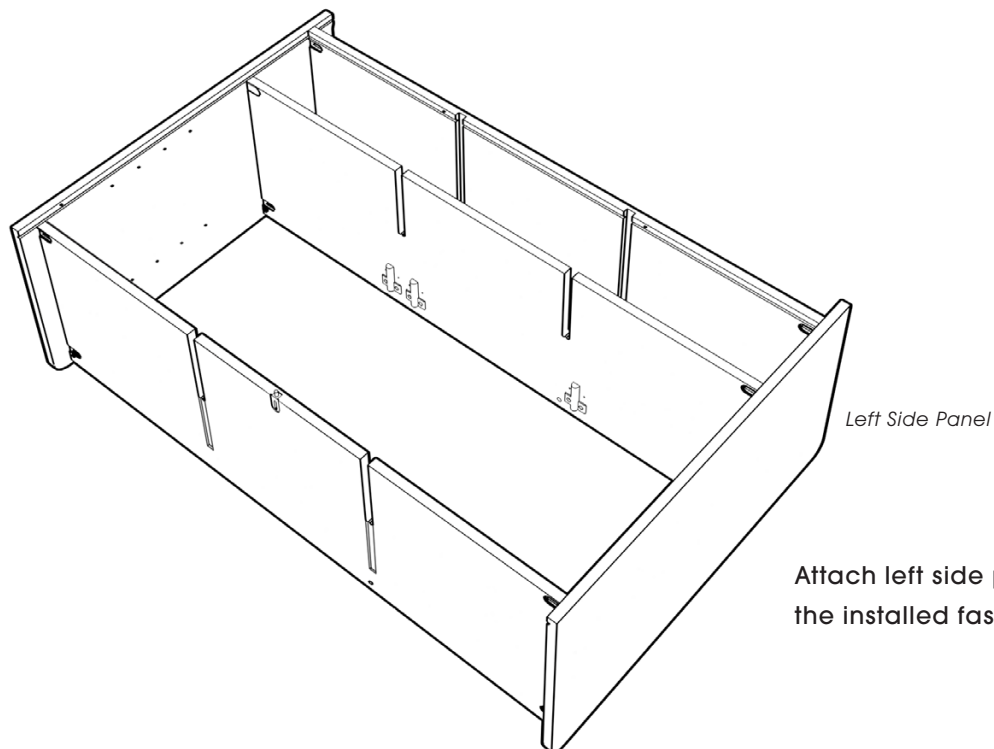

Step 2: Attach Mid and Bottom Shelf

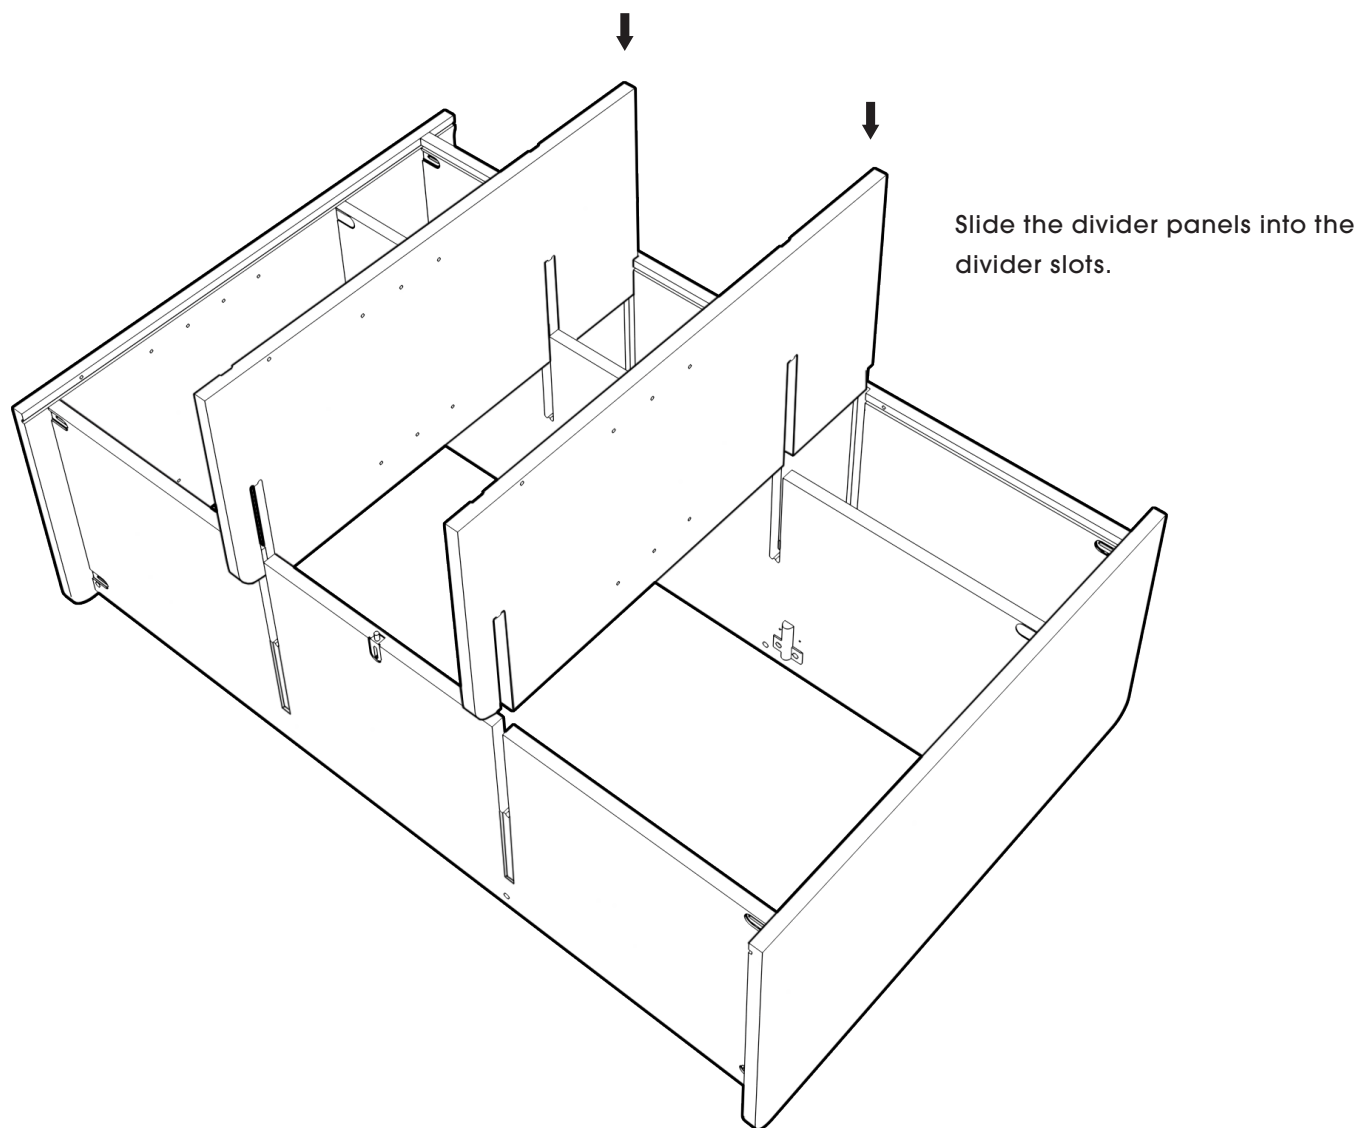

Repeat Step 1 to attach the mid and bottom shelves.

Step 3: Attach Left Side Panel

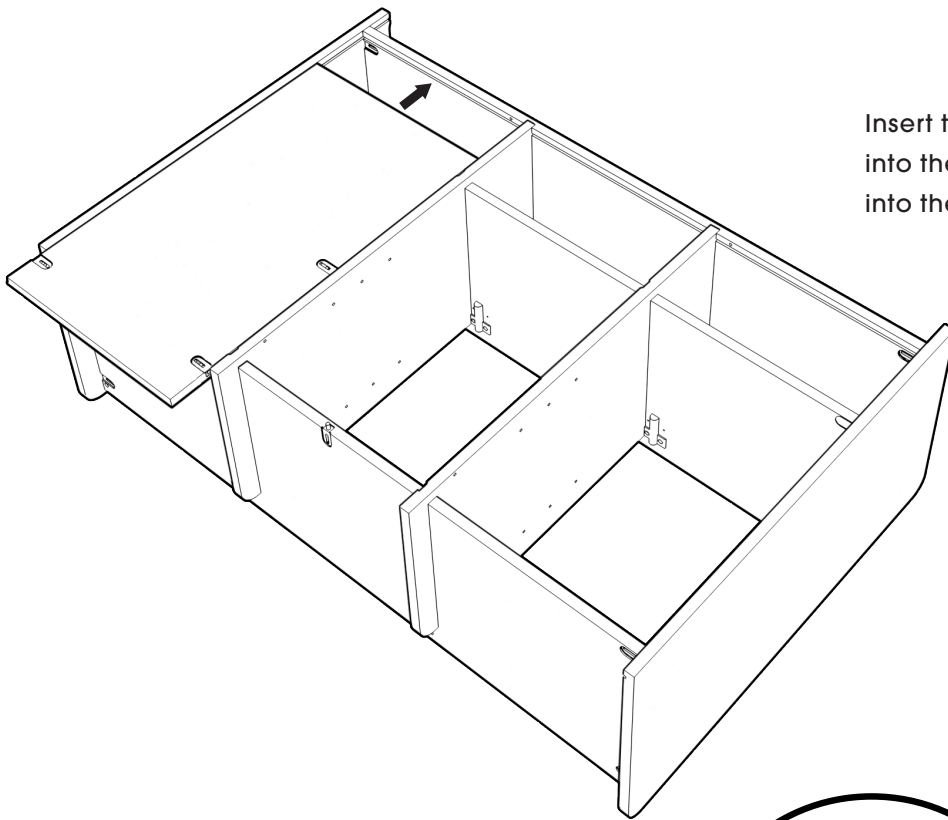

Attach left side panel using the installed fasteners.

Step 4: Instler Divider Panels

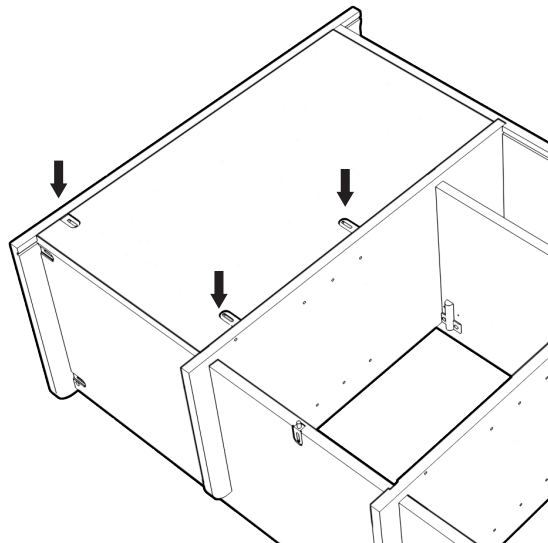

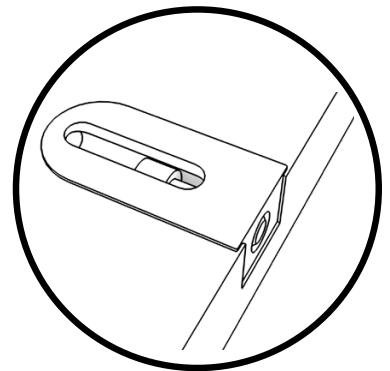

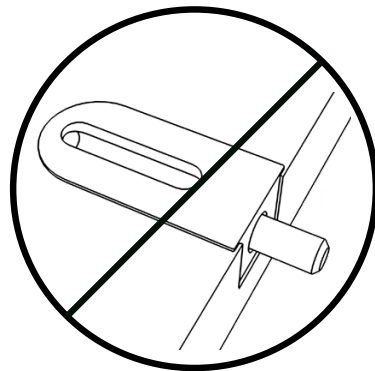

Step 5: Insert Back Panel

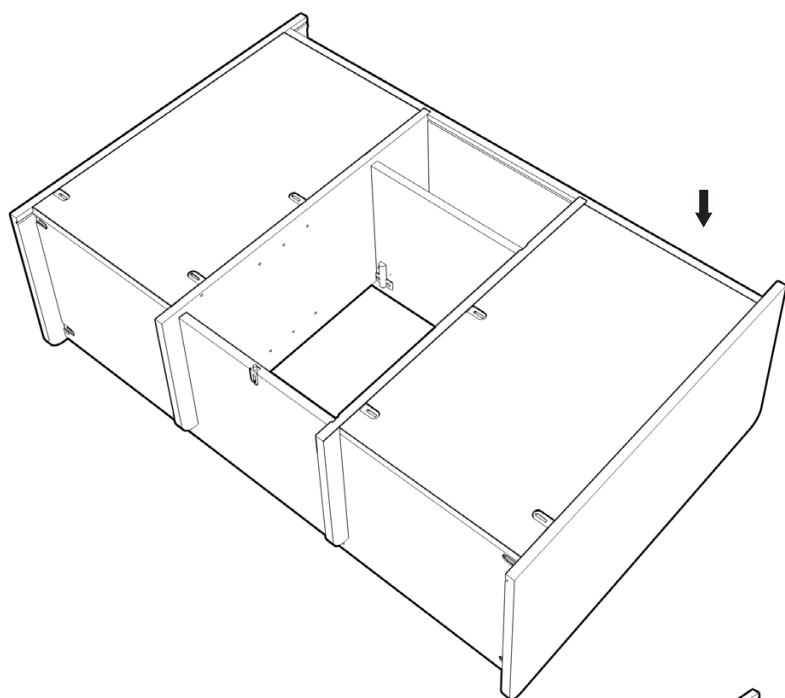

Insert the right back panel into the slots flat. Slide it up into the top slot.

Note: When fitting the peices together, make sure the connecting screws are retracted inside their housing. Having the screw out could damage your surfaces.

Use the installed fasteners to attach the back panel.

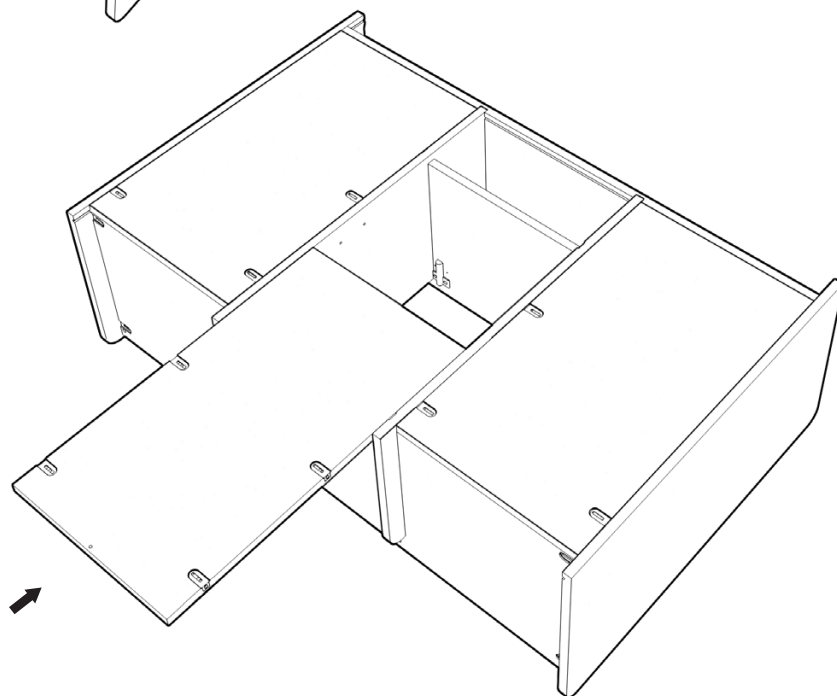

Step 6: Insert Remaining Panels

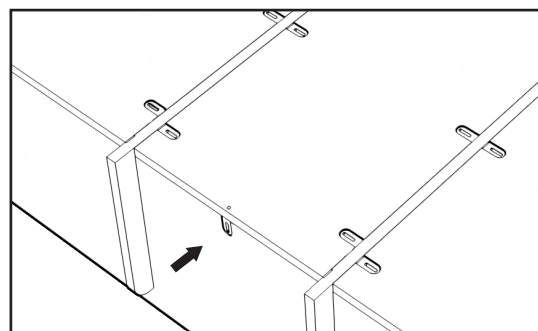

Repeat Step 5 to install the left panel

Next, slide in any center panels.

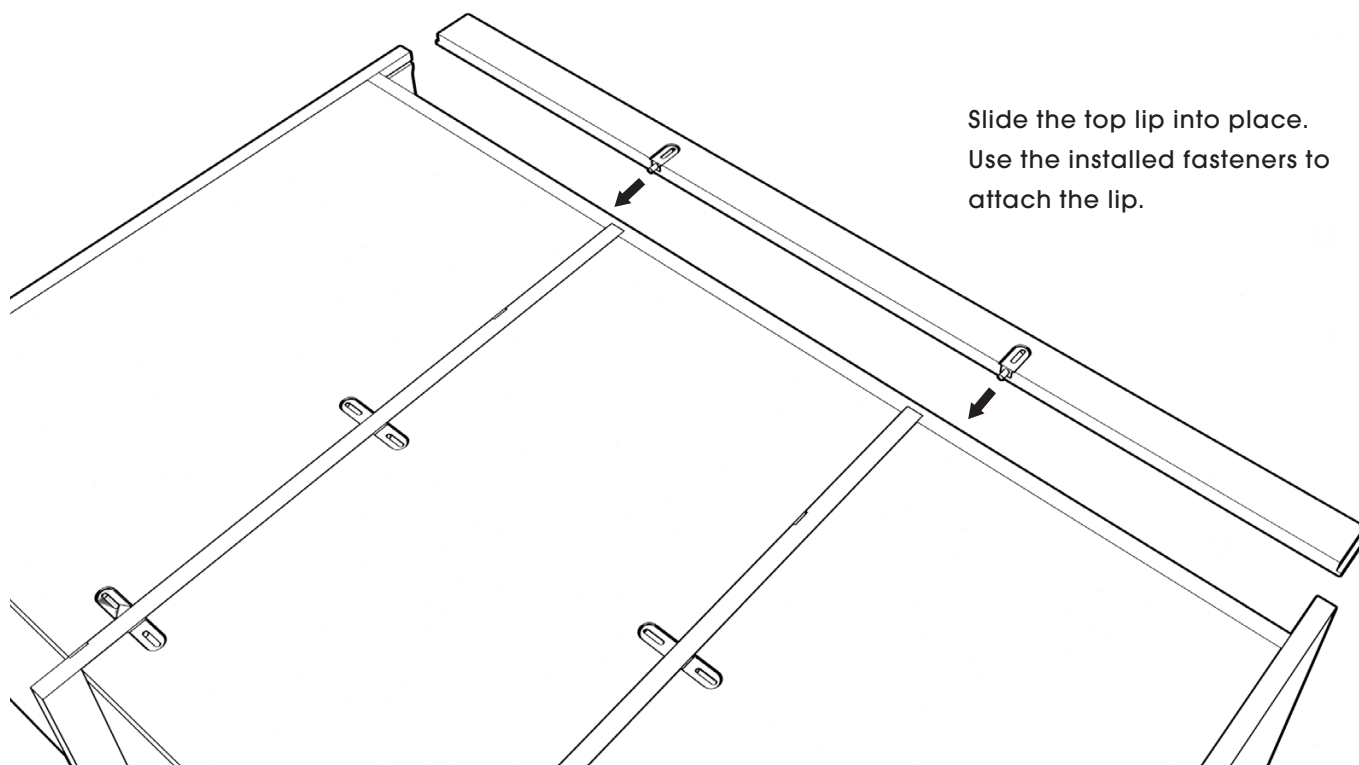

Attach with installed fasteners.

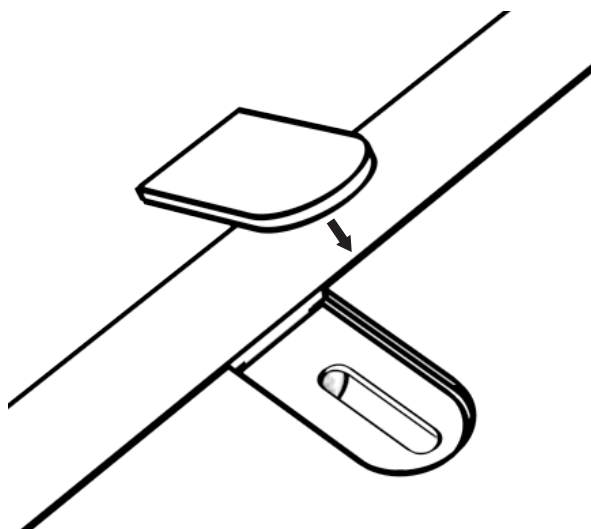

NOTE: There is also a fastener on the underside of the center panels that needs to be tightened at this stage.

Step 7: Insert Remaining Panels

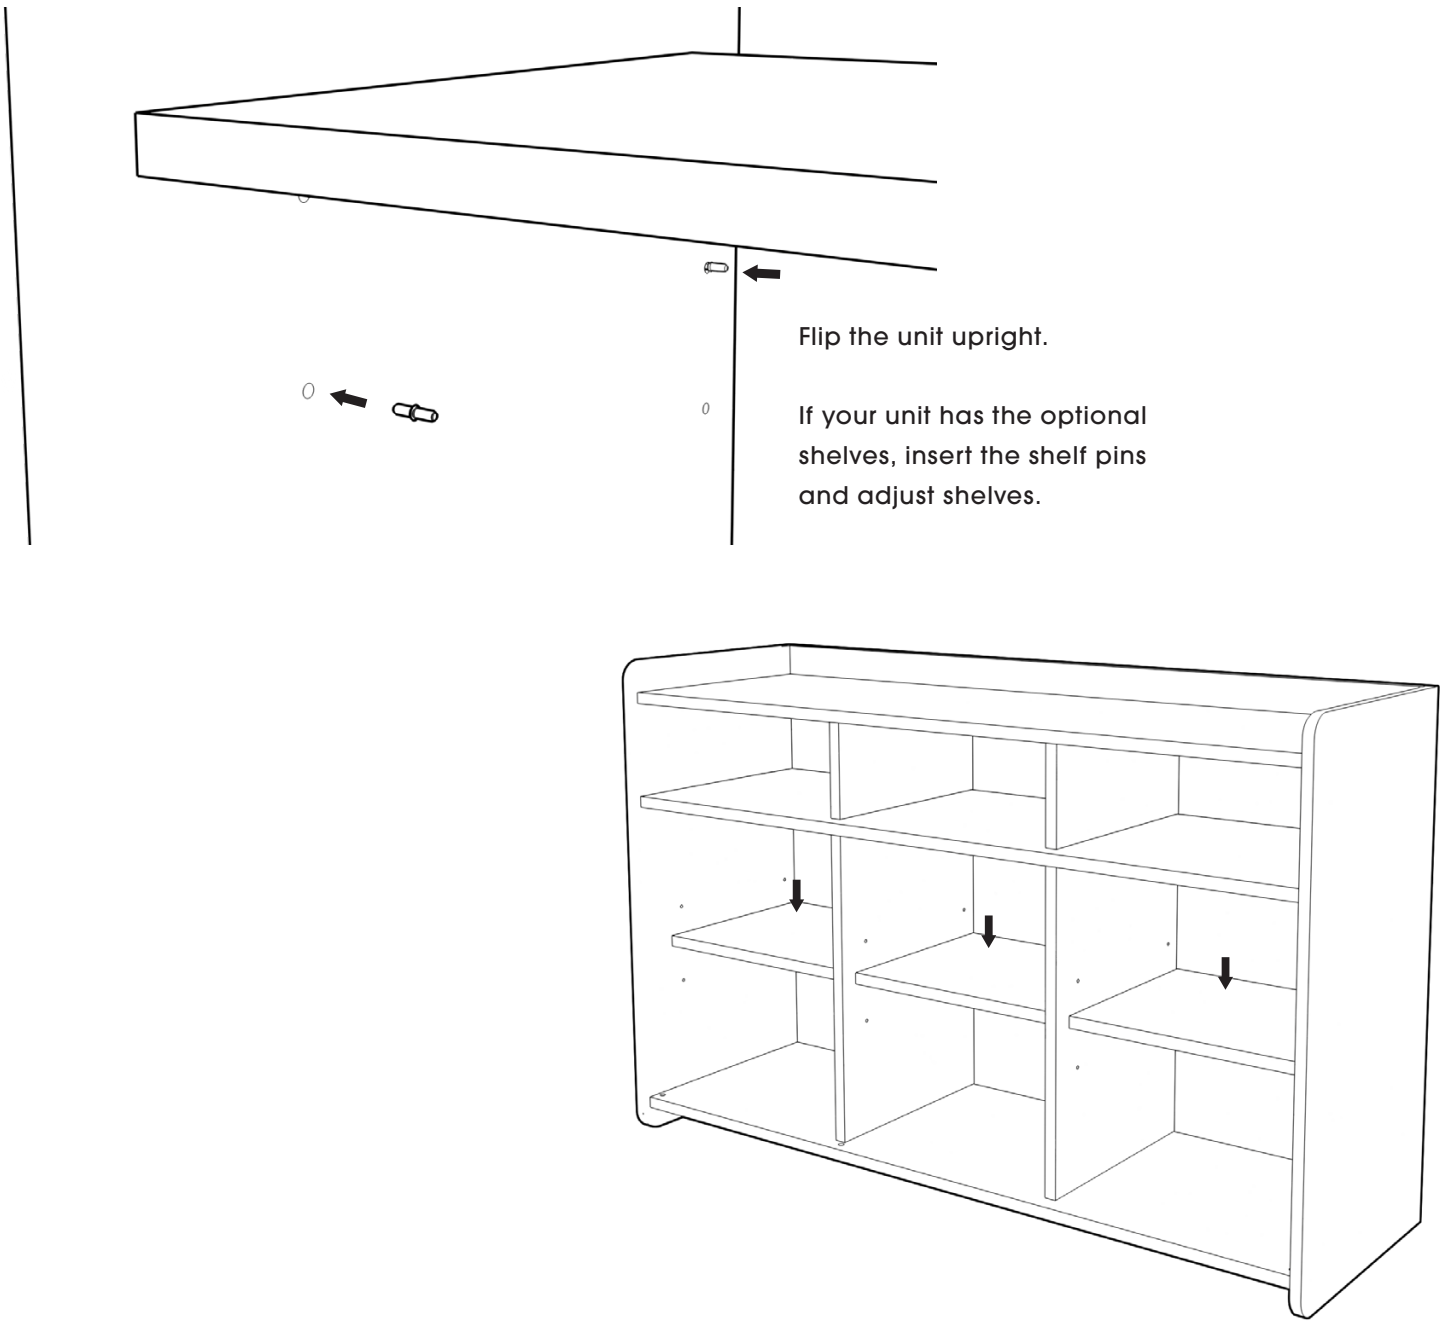

Step 8: Place Caps

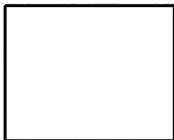

Place caps over all the
installed fasteners.

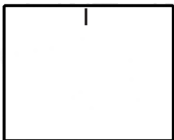

Step 9: Install Shelves (Optional)

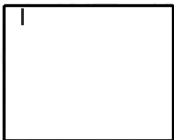

NOTE: Units that are 1 door wide will receive a standard small shelf. Units that are 2 to 4 doors wide will receive small shelves with a notch. Use the center notched shelf in the center alcove of your unit, and shelves with a notch on the side on the outer alcoves

Small Shelf

(Side)

Step 10: Install Lighting (Optional)

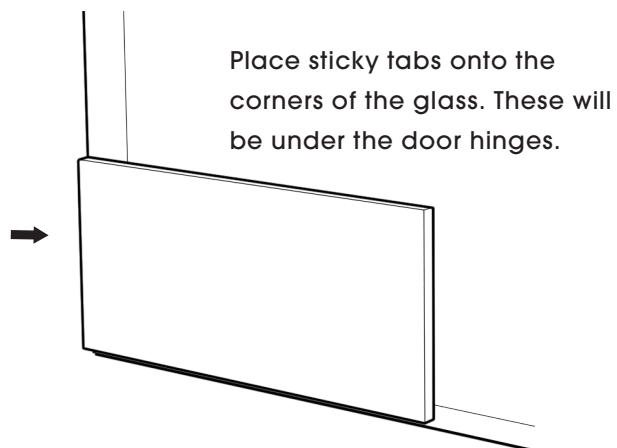

Install the lighting strip (optional) before installing the doors.

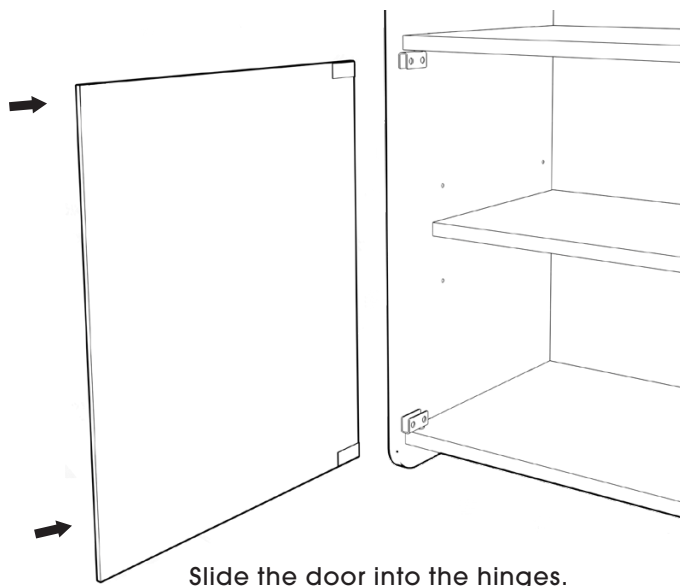

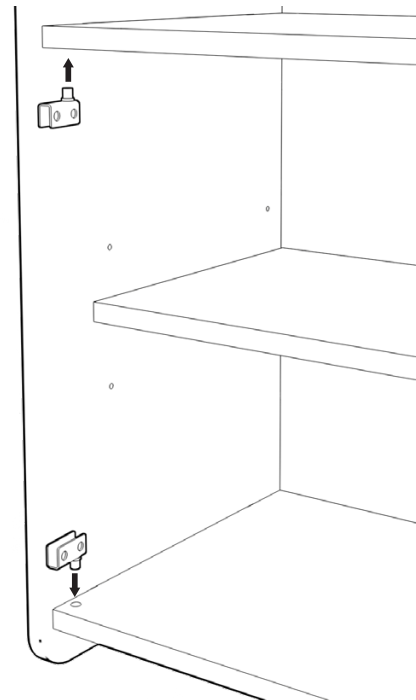

Attach the receiver to the bottom of the unit. Feed the light strip up through the hole in the bottom shelf on either end of the unit and feed the strip through each cubby. Peel back the paper from the adhesive side of the light strip and stick it to the inside of the light channels. Cut away any excess light strip. Use diffuser strips to cover the light channels.

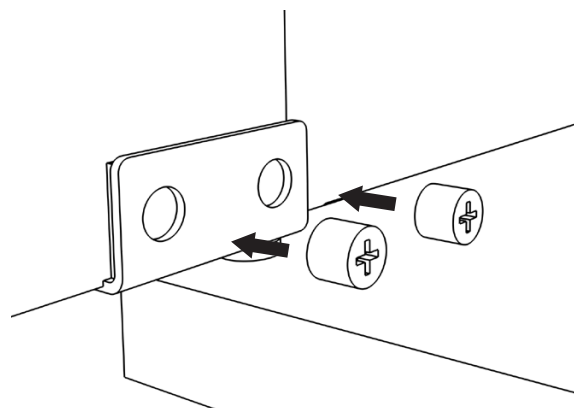

Step 11: Install Doors

Insert the door hinges into the hinge holes.

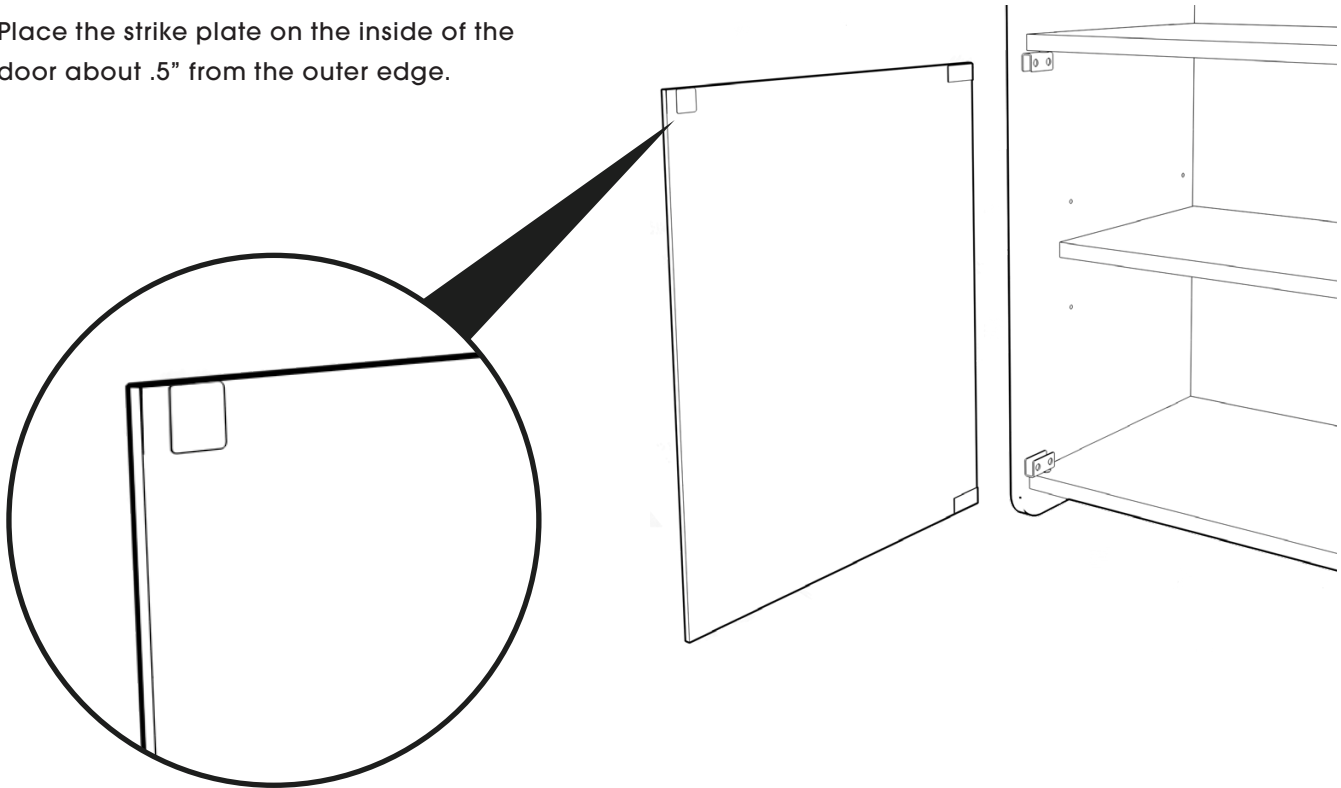

Frosted glass will have the frosted side on the inside.
Fluted glass will have the flutes on the outside.

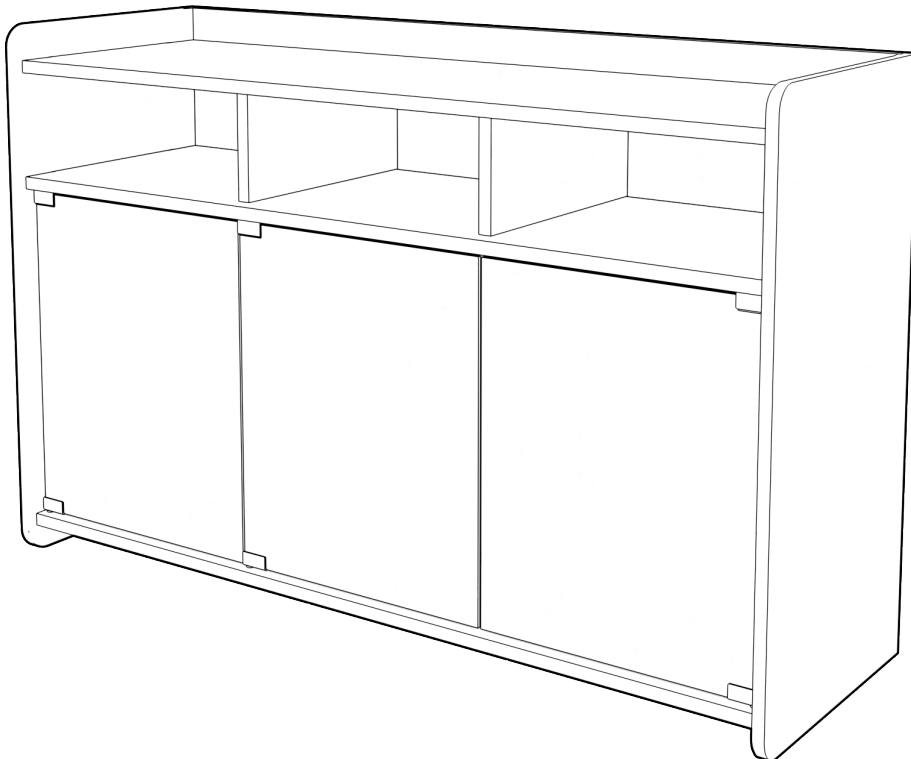

Tighten the hinge screws to attach the glass. Make sure the edge of the glass is flush to the back of the hinge.

Step 12: Add Strike Plate

Place the strike plate on the inside of the door about .5" from the outer edge.

Step 13: Install Remaining Doors

DONE!
